Project

Online Cab Booking Managment System

This Project is done in Python-Django. Centralized, online cab booking system with free registration for cab owners and users .Overcomes sharing problem and tedious updating of previous system .Ease of management and good performance .Book cabs, taxis, and cars with detailed pricing information by city and area

Online Voting Management System

Developed an online voting system tailored for universities/colleges, focusing on improving voter and candidate registration, the voting process, and vote counting. The system provides immediate result compilation, including registered voter and candidate lists, along with total vote counts for each faculty's candidate.

Online Internship Portal Using MERN Stack

Created an online internship portal using the MERN stack. Enhanced user registration and application processes for interns and companies. Improved interface design for seamless interactions. Implemented a robust database system for secure data management. Enabled real-time application tracking and notifications. Provided detailed reports for better decision-making.
